

PROFESSIONAL SERVICES OVERVIEW

Maximizing your investment in JFrog

Accelerating your success in managing and securing your software supply chain through valuable services

JFrog service offerings

iTmethods offers expert consulting for Artifactory, Xray, Advanced Security, and Curation delivering tailored solutions for high-compliance enterprises. We integrate advanced DevSecOps practices to help teams maximize JFrog capabilities.

Implementation

Hands-on deployment and configuration to ensure seamless JFrog rollouts for core and advanced capabilities.

Migration & upgrades

Move JFrog workloads to JFrog SaaS, or your own cloud or hosted environment while ensuring data integrity and minimal downtime

Onboarding & adoption

Seamless setup for new JFrog users and tools. Gain hands-on training on best practices and optimal JFrog usage to accelerate DevOps success

Assessment & strategy

Evaluate JFrog practices, assess workloads, identify redundant or underutilized tools and provide a roadmap for improvement.

Security & support

On-going security assessments, compliance management, monitoring, and optimization of your JFrog environments.

Automation & integration

Seamlessly integrate and optimize your entire DevOps toolchain for greater efficiency, scalability, and collaboration.

Secure Your Pipeline, Ship with Confidence

iTmethods offers a range of expert services to help you implement and optimize JFrog Security, ensuring a seamless and secure DevOps workflow. Here's how we can support your security journey:

Security automation accelerator

We implement automated gates and workflows that catch vulnerabilities before they reach production.

Compliance readiness review

We'll assess your current setup against standards like SOC 2, ISO 27001, or GDPR and implement necessary controls.

Advanced features implementation

We help customers who are invested in JFrog but haven't utilized valuable tools like Xray, Advanced Security and Curation.

TOOLCHAIN MATURITY ASSESSMENT

Identify gaps, opportunities for consolidation, & cost savings

We analyze your current toolchain to uncover gaps, inefficiencies, and opportunities for improvement.

- **Actionable insights** to optimize performance and security
- **Opportunities for consolidation** to reduce complexity
- **Cost-saving recommendations** for smarter resource allocation

We work with over 45 DevOps Tools including Atlassian, SonarQube, Jenkins, CloudBees, GitHub, and GitLab to provide the most effective integrations for SonarQube Cloud and Server.

Jenkins

CloudBees

GitHub

GitLab
