Deliver high-quality code with confidence

SonarQube on the iTmethods DevOps SaaS Platform, powered by AWS, delivers a fully managed, secure, and scalable code quality solution. Designed for organizations needing a single-tenant environment, our platform ensures compliance and performance tailored to your specific requirements.

With SonarQube seamlessly integrated into our robust DevOps platform, you benefit from a reliable, enterprise-grade solution that eliminates infrastructure complexity, allowing your team to focus on delivering cleaner, higher-quality code faster.

Key features

Hosting in region of choice
Hosted in your preferred geographical region (US, EMEA, APAC) to meet compliance and performance needs.

Single tenancy
Each customer gets a dedicated instance, ensuring isolation and enhanced security.

Ability to use plug-ins
You can continue using your community plugins to customize workflows and meet your specific needs.

Cost-effective
Reduce costs with no admin overhead and no capital expenditure required. Available on AWS Marketplace.

How SonarQube transforms your development process

1 ## Deliver cleaner, more secure code
Reduce maintenance costs, improve scalability, and minimize technical debt by ensuring your codebase is clean and maintainable.

Detect and resolve vulnerabilities early with automated static code analysis, ensuring secure, reliable software delivery.

2 ## Seamless integration into your workflow
Easily integrate SonarQube with top DevOps tools like GitHub Actions, GitLab CI/CD, Jenkins, Azure Pipelines, and Bitbucket Pipelines, streamlining your development lifecycle.

3 ## Gain real-time insights
Leverage actionable metrics through "Clean as You Code," providing instant feedback to developers to ensure new code meets quality and security standards.

4 ## Enterprise-grade oversight
Access executive dashboards, compliance reports, and aggregated insights tailored for large organizations to maintain control and visibility over your software assets.

5 ## Accelerate innovation
Minimize rework, enabling developers to focus on delivering new features and creating business value.
