

SOLUTION OVERVIEW

Self-hosted in your cloud, managed by us

CODER

Get a free trial of Coder, fully managed on iTmethodsONE.

Most developers still code on their local machines and waste hours on setup, updates, and troubleshooting. First-time setup for new devs or machines often takes 4–12 hours, stretched across multiple days (due to: docs, tooling, IT permissions, platform differences).

With Coder + iTmethodsONE, you can launch secure, cloud-native workspaces that are fully managed on our private cloud or your own cloud infrastructure—pre-configured, scalable, and ready to go in minutes. These environments come with GPU/TPU support and pre-optimized stacks, so you can run intensive AI workloads securely, without local hardware constraints.

Pricing

STARTING FROM¹

250 DEVELOPERS

| **\$7,900/month**

1,000 DEVELOPERS

| **\$10,900/month²**¹ Pricing after trial ends² Bring your own license or we'll procure one for you

Key benefits

Fully managed service

We handle deployment, updates, monitoring, and ongoing support, so your IT team can focus on strategic initiatives.

Enterprise security & compliance

Keep code and data within your infrastructure, with robust controls and compliance managed to the highest standards.

Rapid developer onboarding

Launch secure, pre-configured environments in under 10 minutes. Empower developers to start building faster.

Integrated experience

Supports VS Code, JetBrains, SSH, and integrates with GitHub, GitLab, Bitbucket, and Azure DevOps.

Ultimate flexibility

Deploy in your cloud, on-premises, or hybrid. We manage the environment to match your architecture preferences.

Optimized for AI/ML

Enable high-performance workloads with GPU/TPU support. Fully monitored and managed by our experts.

SERVICE OPTIONS

Coder workspace solutions

Our services help teams onboard quickly, standardize environments, and scale with ease. From setup to security, we handle it all so your developers can focus on building. Use the QR code to register for our free trial.

FREE TRIAL

✓ Workspace setup & configuration

- Deploy and configure Coder on cloud or on-prem infrastructure
- Set up IDE access (VS Code, JetBrains, SSH) and Git integrations
- Configure secure access with SSO and RBAC
- Create reusable workspace templates and define lifecycle policies

✓ Environment standardization

- Provision consistent environments via Infrastructure as Code (Terraform)
- Support hybrid and multi-cloud deployment models
- Accelerate onboarding with pre-configured, secure environments
- Tailor environments for frontend, backend, and AI/ML use cases

✓ Security, compliance, and monitoring

- Enforce workspace isolation and network-level security
- Manage audit logs, activity tracking, and compliance reporting
- Support regulatory standards (SOC 2, GDPR, etc.)
- Provide centralized dashboards and managed patching

✓ Operational management and ongoing support

- 24/7 monitoring, scaling, and high availability configuration
- Expert support for platform optimization and DevOps guidance
- Managed updates, backups, and platform health checks
- Regular performance reviews and proactive improvement plans

✓ AI/ML & high-performance workload enablement

- Enable GPU/TPU support for advanced workloads
- Optimize environments for ML frameworks and tooling
- Ensure secure data access and workspace isolation
- Monitor and scale compute based on workload needs
